CHISPAS & CONFETTI EVENTS PLANNING
STRUCTURE QUALIFICATION & LIABILITY WARRANTY CONTRACT

Date: September 26, 2026
Invoice Reference: CC-2026-001
Asset Category: Custom Mobile Event Furnishings

This document constitutes a binding Structural Workmanship Guarantee and Transfer of Liability Agreement between **Chispas & Confetti Events Planning** (hereafter 'Seller') and the purchasing entity (hereafter 'Client') listed on invoice CC-2026-001. Payment of the associated invoice validates and fully ratifies the structural rules, constraints, and waivers outlined below.

1. Structural Workmanship & Material Warranty

The Seller guarantees that the custom-built Rustic Wooden Display Cart Table and corresponding Four-Tier Vertical Display Ladder have been hand-assembled using high-grade, structurally sound solid timber. All primary stress points, including axle tracking mechanisms, tabletop cross-beams, and overhead support pillars, are fully reinforced with commercial steel fast-threading brackets.

This craftsmanship warranty covers internal mechanical hardware splits, structural warp defects, or joints loosening under standard indoor operating conditions for exactly twelve (12) months following physical hand-off. This warranty explicitly excludes aesthetic surface weathering, moisture rings, wood stain degradation from liquid spills, or structural buckling caused by improper field transport, dropping, or modifications performed by third parties.

2. Weight Capacity & Operational Threshold Boundaries

To ensure complete crowd safety and maintain the structural integrity of the natural wood framing elements, the Client must adhere to the following strict weight threshold restrictions:

* Custom Rustic Display Cart Tabletop Surface: Total weight capacity must not exceed 150 lbs (68 kg) of static distributed load. Point-source concentrated loads (e.g., placing machinery exceeding 50 lbs directly onto a singular middle plank) are strictly prohibited.

* Detachable Overhead Arch Frame Rafters: The overhead display beams are engineered exclusively for ambient lighting strips, lightweight floral installations, or hanging fabric drapes. Hanging items totaling over 15 lbs (6.8 kg) cumulatively across the top span are strictly prohibited.

* Four-Tier Side Display Ladder: Each open wooden crate basket is rated for a maximum distributed static weight capacity of 20 lbs (9 kg), primarily intended for bread loaves, lightweight baked treats, or boxed event favors.

3. Comprehensive Release of Structural Liability Waiver

Upon completion of on-site assembly, electrical wire routing validation, and formal physical walkthrough sign-off, full operational legal ownership is transferred permanently to the Client. The Seller ceases to maintain operational monitoring or structural jurisdiction over the assets.

The Client assumes all operational risks associated with staging, leveling, moving, and utilizing the display units. Under no circumstances shall Chispas & Confetti be held civilly or criminally liable for property damage, structural tipping accidents, electrical short-circuits due to external socket overloads, or bodily injuries resulting from guest interaction, tipping hazards caused by uneven venue flooring, or overloading beyond designated capacities.

Furthermore, when this structural cart framework is used outdoors, the Client assumes full responsibility for securing the framing against high wind tracking vectors, immediate rain exposure, or soft ground shifting. It is highly recommended to use weighted sandbags or ground anchors for outdoor setups.

IN WITNESS WHEREOF, the parties acknowledge that payment of invoice CC-2026-001 validates and seals this contract permanently.
