CHISPAS & CONFETTI EVENTS PLANNING
STRUCTURE QUALIFICATION & LIABILITY WARRANTY CONTRACT

CHISPAS & CONFETTI EVENTS PLANNING
STRUCTURE QUALIFICATION & LIABILITY WARRANTY CONTRACT

Frame

Date: September 26, 2026
Invoice Reference: CC-2026-002
Asset Category: Custom Mobile Event Furnishings

This document constitutes a binding Structural Workmanship Guarantee and Transfer of Liability Agreement between **Chispas & Confetti Events Planning** (hereafter ‘Seller’) and the purchasing entity (hereafter ‘Client’) listed on invoice CC-2026-002. Payment of the associated invoice validates and fully ratifies the structural rules, constraints, and waivers outlined below.

1. Structural Workmanship & Material Warranty

The Seller guarantees that the custom-built Western Wanted Poster Photo Booth Frame Prop has been hand-assembled using high-grade, structurally sound solid timber and sanded pine plywood paneling. All primary stress points, including rear vertical support spines and base bracket mechanisms, are fully reinforced with heavy-duty fasteners and pocket-hole joinery.

This craftsmanship warranty covers internal mechanical hardware splits, structural warp defects, or joints loosening under standard indoor operating conditions for exactly twelve (12) months following physical hand-off. This warranty explicitly excludes aesthetic surface weathering, moisture rings, wood stain degradation from liquid spills, or structural buckling caused by improper field transport, dropping, or modifications performed by third parties.

2. Weight Capacity & Operational Threshold Boundaries

To ensure complete crowd safety and maintain the structural integrity of the natural wood framing elements, the Client must adhere to the following strict weight threshold restrictions:

- **Plywood Poster Face Panel:** Total static horizontal weight capacity must not exceed 75 lbs (34 kg). Intentionally applying direct forward or backward force, hanging heavy physical items from the interior window cutout rim, or leaning against the face panel is strictly prohibited.
- **Top Frame Border:** The upper display area is engineered exclusively for lightweight ropes, mini western prop elements, or accent latex balloon lines. Vertical suspension weight totaling over 10 lbs (4.5 kg) across the upper beam structure is prohibited to prevent overhead tipping or bowing.
- **Base Carriage Feet & Stabilization Gussets:** The floor-level support feet must remain clear of heavy step-loads or foot traffic. Placing heavy machinery or physical weights exceeding 25 lbs on a single support leg block will strain the carriage bolt connectors and compromise structural balancing.

3. Comprehensive Release of Structural Liability Waiver

Upon completion of on-site assembly, placement validation, and formal physical walkthrough sign-off, full operational legal ownership is transferred permanently to the Client. The Seller ceases to maintain operational monitoring or structural jurisdiction over the assets.

The Client assumes all operational risks associated with staging, leveling, moving, and utilizing the display units. Under no circumstances shall Chispas & Confetti be held civilly or criminally liable for property damage, structural tipping accidents, bodily injuries resulting from guest interaction, tipping hazards caused by uneven venue flooring, or overloading beyond designated capacities.

Furthermore, when this structural frame is used outdoors, the Client assumes full responsibility for securing the framing against high wind tracking vectors, immediate rain exposure, or soft ground shifting. It is highly recommended to use weighted sandbags or ground anchors for outdoor setups.

IN WITNESS WHEREOF, the parties acknowledge that payment of invoice CC-2026-002 validates and seals this contract permanently.
